--------------------------	--------------------------	--------------------------	--------------------------	--------------------------	--------------------------	--------------------------	--------------------------	--------------------------	--------------------------

The screenshot shows a web browser window. The address bar displays a URL starting with 'http://www...'. The page content is in Tamil. On the left, there is a sidebar with a list of items, each preceded by a small icon. The main content area contains several paragraphs of text. The text is in Tamil and appears to be a news article or a report. The browser's interface includes a menu bar at the top with options like 'File', 'Edit', 'View', 'Tools', 'Window', and 'Help'. The status bar at the bottom shows the page title and some additional information.

The screenshot shows the RStudio IDE with a script editor. The code in the script editor is as follows:

```

# Base URL
base_url = "http://localhost:3000/"

# GET endpoint
get_endpoint = "http://localhost:3000/api/v1/"

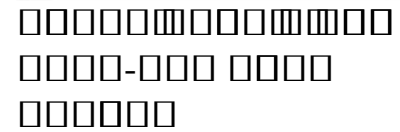

# Function to fetch data
get_data = function() {
  # Send a GET request to the endpoint
  response = httr::GET(base_url %>% paste0(get_endpoint))
  # Parse the JSON response
  data = httr::content(response, as = "json")
  # Return the data
  return(data)
}

# Test the function
get_data()

```

The code is written in R and uses the 'httr' package for HTTP requests. The function 'get\_data' is defined to fetch data from a REST API. The code is intended to be used in a Jupyter Notebook, as indicated by the 'Jupyter Notebook' button at the bottom right of the script editor.
